SUMMARY

Adaptive Software Engineering graduate with a strong foundation in Backend development and a versatile mindset for Full-stack solutions. With 6 months of hands-on experience in the .NET, I have a proven track record of building scalable systems using Clean Architecture and modern design patterns. Beyond my core expertise in .NET 8/9, I am proficient in Angular 19, allowing me to bridge the gap between robust server-side logic and seamless user interfaces. I am committed to continuous learning and leveraging AI-driven tools to deliver high-quality, end-to-end applications.

EDUCATION

Hanoi University of Mining and Geology

Major: Software Engineering

Graduated: 12/2025

TECHNICAL SKILLS

Back-end:	.NET Framework & .NET Core (8/9), ASP.NET MVC, Entity Framework Core, Web API, SignalR
Architecture & Patterns:	Clean Architecture, CQRS (MediatR), ABP Boilerplate, Repository & Unit Of Work
Databases:	PostgreSQL (Stored Procedures, Optimization), SQL Server, MySQL
Front-end:	Angular 19 (TypeScript), HTML, CSS, JavaScript, Bootstrap, TailwindCSS
Languages:	C#, Java, Dart, TypeScript
Tools & Others:	Docker, IIS Deployment, Git/Gitlab, Winform, RESTful APIs, JWT Auth
English:	B1 (VSTEP)

WORK EXPERIENCE

Backend Developer Intern

BBK Solution Technology

03/2025 - 08/2025

- Engineered and maintained scalable backend modules for enterprise management systems using .NET 8 and .NET 9.
- Optimized PostgreSQL databases by writing complex stored procedures and refining queries, significantly improving API response times.
- Implemented the RBM (Religious/Belief Management) system utilizing ABP Boilerplate to handle complex Role-Based Access Control (RBAC).
- Developed secure RESTful APIs and assisted in deploying backend services leveraging IIS.

PROJECTS

Chat AngularNet

01/2026 - Present

Position: Full-stack Developer | Team size: 1

https://github.com/namy1622/Chat_AngNet

Technologies: .NET 9, Angular 19, SignalR, MediatR (CQRS), EF Core, JWT, BCrypt, PostgreSQL, TailwindCSS

- **Architected** a real-time full-stack chat platform implementing **Clean Architecture** (Domain/Application/Infrastructure/API) to ensure system scalability and maintainability.
- Built the core real-time messaging flow using **SignalR WebSockets** and decoupled read/write operations utilizing the **MediatR (CQRS)** pattern.
- Designed scalable relational database models in PostgreSQL for 1-1 chats, group channels, user friendships, and real-time read state notifications.
- Secured the application via robust authentication/authorization combining JWT Bearer, BCrypt password hashing, and Angular HTTP interceptors.

Logistics Management System

10/2025 - 12/2025

Position: Backend Developer | Team size: 1

<https://gitlab.com/namy1622>

Technologies: ASP.NET Core (ABP Boilerplate), PostgreSQL, jQuery, Bootstrap, Chart.js

- Developed core logistics modules including Warehouse Order flows, Shipper routing, and Automated Reconciliation using ABP Boilerplate.
- **Optimized** complex PostgreSQL queries to accurately aggregate data for operational reporting and interactive admin dashboards (Chart.js).
- Applied Repository and UnitOfWork patterns to guarantee transaction consistency and implemented granular Role-Based Authorization.

Religious Belief Management

05/2025 - 08/2025

Position: Backend Developer | Team size: 3

https://gitlab.com/tongjiao_tinnguong

Technologies: ASP.NET Core (ABP Boilerplate), PostgreSQL, jQuery, Bootstrap

- Collaborated in a team of 3 to design and implement backend modules for managing religious facilities, belief institutions, and activity planning.
- Wrote and optimized stored procedures in PostgreSQL to ensure rapid data retrieval across complex relational tables.
- Utilized ABP framework's core features to implement a secure user role-based authorization system and structured the project using Repository patterns.
